

Performance Analytics for EC&O

How can SAP® solutions enable you to change the game?

With SAP solutions, engineering, construction, and operations companies can leverage consistent business intelligence from all phases of the construction lifecycle to mitigate financial risk. SAP solutions help companies gain real-time insight into project information to maximize resource productivity and increase project profitability.

What do SAP solutions help customers do?

Manage project information

Access comprehensive business intelligence across the project lifecycle, covering all aspects of project execution, while enabling connectivity to virtually any data source – both internal and external.

Optimize decision making

Visualize relevant data to support optimal decision making, see the status of business and project execution at a glance, and use ad-hoc query functionality for further data analysis when required.

What are the benefits?

SAP solutions support effective construction lifecycle management so companies gain:

- Greater project profitability through insight into execution and productivity
- Enhanced agility due to timely information analysis for optimal decision making
- Improved project performance through transparent historic project data and benchmarks
- Increased stakeholder collaboration throughout all phases of the project

Why SAP?

SAP solutions connect processes for a variety of industry value chains by integrating horizontal lines of business with industry-specific solutions on premise, in the cloud, and through mobile devices.

Key facts

+20% Revenue per employee

In firms that use information to identify strategic and competitive advantages*

+50% Revenue growth

In firms where systems can support historic, current, and predictive analysis*
